

🧠 SEED TEASER

Personal Supercomputing, owned by you.

A private AI agent you own, a personal supercomputer you own, and a safety wearable for the people you love, tied together by a consent-first protocol.

THE PROBLEM

The world already knows you. You don't own any of it.

- Data brokers, ad networks, and platforms hold a profile on almost everyone.
- It was collected without real consent, and it is bought and sold.
- The human, the one it is all about, is the only party with no control.

THE INSIGHT

Consent as architecture, not policy.

- Your data lives with you, on hardware you own.
- The world asks you, for one purpose, for a limited time.
- Every share leaves a receipt you can read and revoke.

The open Hushh Protocol (PCHP) is the mechanism.

WHAT WE BUILD

Personal Supercomputing you own.

- 🧠 Agent One, a private AI agent you own, free for life.
- 🐶 Puppy One, a personal supercomputer you own.
- 🏷️ Tag One, a safety and wellness wearable for the people you love.

THE WEDGE

Data that cannot lawfully leave the owner's control.

- Private and regulated data (health, finance, government) is the sharp edge.
- It is exactly the data hyperscalers cannot touch and the human must own.
- Consent-first is not a feature here, it is the only way in.

WHY NOW

AI demand is outrunning owned compute. Data rights are hardening.

- Intelligence should be as available as electricity, owned, not rented.
- The regulatory and cultural moment favors human-owned data.
- The edge and cloud grid is effectively sold out.

THE MODEL

Free to the human. Paid for by those who benefit.

- Agent One is free, for life. Free is the wedge, not the business.
- Reach is sponsor-funded: 🧐, partners, and Fund A, never the human.
- Customers pay for power (Pro tags, Puppy One) and white-glove service.

The funding model is our plan, stated plainly, not signed deals.

GO TO MARKET

A free Agent One in every human's hands. Start with every American.

- Grassroots field plus scaled, sponsor-funded distribution.
- Grounded in how the best reached hundreds of millions with free products.
- We measure activated-and-retained humans, not vanity registrations.

THE COMPOUNDING ENGINE

A distributed edge supercomputing grid, owned by people.

- The AI Factory: garages and warehouses run Puppy One fleets.
- They use it first, then sell idle capacity. We take a rate on tokens per watt.
- Scaling, not fully live. We say so.

THE TEAM

Builders who ship in the open, every day.

- Manish Sainani, Founder, CEO and CTO, and Product Owner.
- Mark McLaughlin, Executive Chairman and Day-Zero Angel.
- Suresh Attuluri, Angel and Acting Chief Engineer.

We name openly the gaps we're hiring for, including a head of engineering.

THE AMBITION

Generational, and we're not being shy.

- We believe 🧠 can compound on the kind of long arc Alphabet ran.
- Own the human's intelligence the way Alphabet organized information.
- A forward-looking aspiration, not a promise or a projection.

THE ASK

We'd value your counsel. The full deck is a request away.

- We're early, we say so, and we're raising a Seed toward the first real traction.
- Verify with your firm email to open the full confidential deck and data room.
- Reach us directly. Let's talk.
